

Equity Gap Calculation

Step 1:

Pull the STAAR Progress Measure Percent at Expected or Accelerated Growth by Grade and Subject (All Grades Both Subjects At Expected or Accelerated level) and fall enrollment data for African American (AA), White (W), Hispanic (H), Economically disadvantaged (E), and Non-economically disadvantaged (N) for school years 2017–18, 2018–19 and 2021–22.

(n size = 20 or greater)

- Enrollment data for Non-economically disadvantaged was derived from subtracting the total enrollment and the number of Economically disadvantaged.

Step 2:

Calculate the percentage gaps for the “% meets or exceeds student progress for all tests” for the following student group comparisons:

- African American and White
- Hispanic and White
- Economically disadvantaged and Non-economically disadvantaged

Step 3:

Districts with gaps greater than 10% between any two student groups in two of the last three years were flagged and will be notified. If Equity gaps do not decrease these districts may be required to submit an Equity Plan to the agency in 2023-24.
